

ASPIRATOR BULB

Single Hand Operation, Vacuum or Pressure

The **Model A-350 Aspirator Bulb** can be used to source pressure for calibration and leak checking tests. Simply squeeze the bulb after the tubing is connected to generate pressure. For applications such as our CO2 indicator, the aspirator bulb can be squeezed before inserting the tubing to draw a vacuum to pull the smoke or air from a duct or stack into the gage.

MODEL CHART	
Model	Description
A-350	Aspirator bulb

BENEFITS/FEATURES

- Offers vacuum or positive pressure sourcing
- Compact and portable
- Most cost effective option
- Reference gage recommendation: Magnehelic 2010

APPLICATIONS

- Test instrument calibration
- Pressure switch calibration
- Pressure transmitter calibration
- Smoke leak testing
